

## Editorial

We now release the last issue of the eleventh volume of the **International Journal of Information Studies** with the papers described as below.

In the first paper on “**Strategies in Economic Diversification for Self-Reliance in Nigeria**” the authors *Ogar, Christopher Eje* and *Atanda and Luqman Ayanlola* basically described the education, economic diversification, self-reliance and Nigeria. They stated that the nation’s educational system needs to orient towards the employment needs of the citizens of the country. They concluded that it leads to the self-reliance and sustainability of lives and businesses as well as one of the ways of solving unemployment problems in Nigeria.

In the next paper on “**Prospective Areas of Implementing IoT Applications in Libraries**” the author *Arumugam*, highlighted the possible areas to implement the IoT applications in libraries. It also implies the merits, demerits and limitations of IoT applications in the libraries.

In the last paper on “**Semantic Web Technology in Digital Libraries: An Overview**” the authors *Ashwini* and *Kavitha* explained how the semantic web technology expands the usefulness of the digital libraries. They have outlined the emerging concept of social semantic digital library and explores the potential of using semantic web technology for the digital libraries.

The papers mark good orientation to the important concepts for information handling activities.
