Editorial

We are pleased to release the last issue of this volume of the **International Journal of Information Studies**. The papers published in this issue characterize the users' perception while accessing information.

In the first paper on "**Use of Smart Devices by Students of Library and Information Science: A Case of Babasaheb Bhimrao Ambedkar University, Lucknow**", the authors *Avinash Kumar Singh,* and *Mahawar Balmukund Tiwari* have studied the impact of smart phone on higher education students. They tracked the data with online questionnaire and found the increasing dependence of smart phones by the students. They concluded that the students need to be oriented to the proper use of them.

In the second paper on "**User Perception Tapping in Academic Environment: Evidence-Based on Case Study**", the authors *Vimaladevi,* and *Mahesh Kumar* have tapped the users' responses towards the library services. Even this topic seems to be not entirely new, they have addressed the issue in a new angle. The basis data is presented in a few tables, but the supporting figures offer good insight of the problem.

In the last paper on "**Information Perception and Satisfaction of Library users in Digital Era: A Case Study of S S Agrawal College of Nursing Training College and Research Centre, Navsari**", the authors *Samir Shaikh* and *Indira Dodiya* also did a user perception study in a specific institution by instituting a questionnaire to a good population size. The findings are summarized in a structured way by the authors.

We do hope that the future user surveys may orient in a new direction in the way of new tools and resources.
