Editorial

We bring the last issue of the tenth volume of the *International Journal of Web Applications* with the below described research pieces.

In the opening paper on “*Evaluation of National Libraries’ Websites of BRICS Countries: A Webometric Analysis*” the authors *Krishna Brahma* and *Manoj Kumar Verma* evaluated the national libraries’ websites of five countries i.e., Brazil, Russia, India, China and South Africa (BRICS). They used the criteria such as domain and page authority, domain extensions, internal equity-passing links, external equity-passing links, internal links, external links, total links, followed linking root domains, total linking root domains, just discovered links, linking C blocks, spam score, types of file format and Web Impact Factor. The result of the analysis is the extensive description of the pages.

*Oghenere Salubi, Ndakasharwa Muchaonyerwa* and *Fhulu Nekhwevha* in their paper on “*Digital Media Usage and Prevalence of Internet Addiction among Undergraduate Students in South Africa*” studied how excessive non-academic use of the Internet detrimentally affects undergraduate students’ daily lives. The findings clearly suggested that the uncontrolled use of Internet is both a hazard and a potential danger to academic productivity.

In the last paper on “*Identifying Relative Weights of Evaluation Indices for Library Website Usability Acceptance Model by Applying the Extent Analysis Fuzzy AHP Approach*” the authors *Kokila Harshan Ramanayaka, Xianqiao Chen* and *Bing Shi* have proposed models of usability evaluations and evaluate the ease of use of website operations and see whether the users can perform their tasks easily. The study concluded that satisfaction was the dimension that the experts considered most important in evaluating the website usability.

These papers represent the webpages evaluation from difference perspectives.
