Editorial

We release the first issue of the fifteenth volume of the **Journal of Data Processing** with the below-described papers.

In the opening paper, "**Research Data Management Repositories: A Case Study**," the authors surveyed Research Data repositories. They captured the intellectual output of the faculties and research scholars of social science universities and institutes, collected it, digitized it, and then made it accessible at the local and national levels in a phased manner. They brought several research data repositories under one roof to examine their present state and prospects.

In the next paper, "**Implementation of the SWAMYAM Course among the PG Students and Faculty: A Critical Study**," the authors studied how the students use the SWAMYAM Course in the master's programme. They studied the three cardinal principles of education policy: access, equity, and quality. They studied the various subjects involved in the SWAMYAM Course.

In the third paper, "**The Sustainable Library of the Future: Embracing the New Age through Digital Transformation**," the authors reimagined the library in a rapidly changing world through the three defining dimensions: ecological responsibility, community engagement, and inclusive knowledge access. They studied the sustainable library with several features.

In the last paper, "**Implementation of ICT Initiatives of the Ministry of Education, Government of India by the University Libraries of Karnataka State: A Study,**" the authors studied the implementation of ICT initiatives of the Ministry of Education, Government of India, within the university libraries of Karnataka State, exploring their adoption, challenges encountered, and impact on library services and user experiences. The findings highlighted the successes achieved and the persistent barriers hindering full ICT integration, offering recommendations.

We will conduct more research on the next issue.
