

## **Editorial**

We welcome the readers of the **Journal of E-Technology**. We the new editorial board is pleased to release the first issue, the ninth volume of **Journal of E-Technology**. We publish three important research in the issue.

In the opening paper “***Developing Mobile Apps to Protect Environment***” the authors have developed an application for the elimination of car damages. The application has three parts which is helpful to clarify car key issues, contributing in this way also to solving the environmental problems regarding pollution.

In the next paper on “***H.R.D.A. System (Heart Rate Detector Alarm System)***” the author have developed a system which is a bracelet designed to detect the pulse of a person with a cardiac condition. The authors have viewed that it is a fast and efficient way to send a warning message and to inform a person in charge of supervising a patient in case of an emergency. We wish the readers a good reading.

In the last paper on “***Android Application for Providing Mobile Devices Characteristics***” the authors have presented an application designed for smart phones with Android operating system which is named as TestIT. The proposed design can serve as a replacement with a newer and therefore more expensive model.
