
Journal of Intelligent Computing Volume 2 Number 2 June 2011

Contents

Editorial

i

Research

A New Approach for Potentially Breast Cancer Detection Using Extracted Features and Artificial Neural Networks-

Malik Braik, Alaa Sheta

54

A New Arithmetic for Dividing Packed Bar Steel-

Wang Jingzhong, Chen Hao, Xu Xiaoqing

72

Discovery of Capacity-Driven Web services-

Samir Moalla, Sami Yangui

80

A Connectionist Model for Prediction of Humidity Using Artificial Neural Network-

Bimal Dutta, Susanta Mitra

96

Conference Notisication

106

- The Fourth International Conference on the Networked Digital Technologies (NDT 2012)
- The Fifth International Conference on the Applications of Digital Information and Web Technologies (ICADIWT 2012)
- Seventh International Conference on Digital Information Management (ICDIM 2012)

Journal of Intelligent Computing (JIC)

This new issue of the **Journal of Intelligent Computing (JIC)** shows the breadth of intelligent systems with a particular focus on applications of Computational Intelligence Techniques in Engineering Applications for this issue.

There are four papers in this issue. Two of these papers look at applications in manufacturing. Neural Networks seem to be a popular technique to be investigated and used widely. It is also used in the first paper of this issue that looks at data mining in medical images for detecting cancer. The fourth paper in this issue looks at data mining for capacity-driven web services.

This is another interesting issue of JIC, which focus heavily on applications of artificial intelligence in real world systems. It is another step in providing a platform for researchers in the wider field of Intelligent Computing to showcase their research and communicate their results with the rest of the community.
