Contents

• Fourth International Conference on Future Generation Communication Technologies (FGCT 2015)

• First International Conference on Data and Communication for Science, Technology and Society
(ICDCST 2015)

• Fifth International Conference on Innovative Computing Technology (INTECH 2015)

Editorial

The first paper deals with the e-learning environment in developing countries. The authors tried in this paper to measure the users perception of the current e-learning process. They have used statistical techniques to measure and judge the outcome of the process.

The next study on digital learning has compiled the digital-media teaching materials and used the domain business administration, corresponding with the requirements of two courses "*Innovative Technology Management*" and "*Cultural and Creative Industries Management*".

The third paper has studied how the cognitive pattern has influence in web use. The three cognitive patterns used are use-focused, (2) goal-focused and (3) information-focused. Authors have found that the results provide convincing evidence to support different cognitive patterns in using websites, and suggest that these patterns be recognized and managed in constructing and maintaining websites.

We will soon release the last issue of this volume.
