

Editorial

We welcome the readers to consume the new research in the information organization with the papers in the new issue.

In the first paper on **“Empirical Study on Affect Factors of the Marine Science and Technology Enterprises Innovation of Zhejiang Province, China”** the authors *Chen Hongxia, Yang Hongtao* and *Xue Caihong* have highlighted the issues which affect the Marine technology innovation in the selected region of China. They are able to arrive at a total platform of organizing information relating to marine technology human resources, Marine science and technology policy, financing environment and infrastructure.

Huang Xi-Jia, Zhou Qing and *Chen Xin* in the paper on **“Preliminary Study on the Survival Mode of Intangible Cultural Heritage Based on System Theory”** have worked for the protection and management of cultural heritage’s inheritance. They have developed a survival system of intangible cultural heritage resources at a macro-angle, which includes cultural memory of nations and communities, present status of private individual particular hobbies and skills, organization base of clans and traditional rural communities and grass-roots units, besides many more factors.

Jaime Yesith Valencia Gavlán and *Luis Eduardo Becerra Ardila* in the last paper on **“Model of information system to support the management of research projects in research groups”** proposed a model of information system that supports the management of research projects, and that allows for an improvement in the process.

The papers are more comprehensive and addressed the issues for a better information organization model.
