

## Editorial

This issue has the following described research papers.

In the first paper on “**Using the Information Literacy Model for Information Literacy Instruction: A Case Study**” the author *Marzieh Siamak* has proposed a new information literacy model and tested with target population. The author has correlated skills and literacy and found positive links. The model after testing found to be more valid as the testing data confirmed it.

*Mahdi Alhaji Musa* and *Mohd Shahizan Othman* in the second paper on “**Critical Success Factor in Business Process Reengineering In Healthcare: An Exploratory Investigations**” have critically examined the success factors for business process re-engineering. The results revealed that measurement of effectiveness of IT on the BPR is the most critical success factor for BPR implementation.

In the last paper on “**Modeling Social Media Data for Sports Analytics**” the authors *Vinay Kumar Jain* and *Shishir Kumar* presented the relationship between social media data and the outcome prediction of sport event using a dataset containing messages from Twitter. They have used the cricket game outcome prediction for examination and they produced detailed results.

We will shortly bring the next issue.
