

## Editorial

We are pleased to release the second issue of the Journal of Information Technology Review. This issue has the following papers.

In the first paper on **A New Robust Watermark Scheme using SIFT**, the authors Son Nguyen Thai proposed an improved new robust watermarking scheme using scale-invariant feature transform (SIFT) for the discrete wavelet transform (DWT) domain.

In the second paper on **“Language Model for Assessing the Author Similarity”** the authors analyzed the metadata information relative to an author, in order to find out similar authors and proposed the Author Similarity Model, In the last paper on **A hybrid Dynamic routing protocol for congestion free traffic in Vanets**, the authors have proposed HDRP (hybrid dynamic routing protocol) and beacon message to find the reliable path to control the traffic and for the safety purpose.

The papers hope to generate more research interest in the domain.
