

## Editorial

We bring the tenth volume of the **International Journal of Information Studies** with the following described papers. In the first paper on **“Using Structural Equation Modeling Approach to Investigate the Impact of Technological Factors on User Satisfaction”** the authors *Yaser Hasan Al-Mamary, Yahya Abdul Ghaffar Hassan, Murad Al-nashmi* and *Alina Shamsuddin* identified the technological factors that impact on user satisfaction through framing of a few hypotheses. The authors have tested the model with structural equation modeling techniques. They found that there are significant relationship between information quality, and service quality with user satisfaction.

In the second paper on **“A Retrospective Study on Integration of Knowledge Management (KM) and Business Intelligence (BI)”** the authors *Rajesh Arora* and *Hema Date* based on the literature reviews have studied the *publications from categories of KM, and BI. They have analysed the integration of both KM and BI in the study.*

In the last paper on **“PPO-An Approach to Personalized Web Acceleration”**, the authors *Shailesh Shivakumar* and *Suresh* have studied the various aspects of personalized performance optimization algorithms in web personalization. They have discussed the discussed a novel approach using “Personalization performance Optimization” (PPO) framework. They have found that their approach has resulted in 30% increase in page response times and 35% increase in cache hit ratio during our experiments.

The papers of this issue have produced interesting results.
