

Editorial

We are pleased to release the fourteenth volume of the **International Journal of Web Applications** with the research published as below.

In the first paper on “**A method to identify the unlawful landfills in the Environment**” the authors have developed a client-server system that can improve the ecological awareness. They have introduced a method to identify the unlawful landfills and also detecting other issues.

In the second paper on “**Phase detector, loop filter and digital control oscillators for control resonant inverters**” the authors have fixed the optimal all digital PLL for the control resonant inverters. They conducted experiments that find the control approach required.

In the last paper on “**Face recognition and modelling for accurate identification**” the authors produced a model for Face recognition and identification. This system is based on a parameterized curves and topological guards. The authors have experimented the produced system and applied in a target group with selected members.

The forthcoming issues may bring more research.
