Editorial

We present the third issue of the fourteenth volume of the **International Journal of Web Applications** with the below described papers.

In the first paper on "**Web services deployment in cloud environment**", the authors have discussed the hardware and software in the cloud environment. In this paper, the authors have deployed the web service, hosted two difference multitenant cloud structure. The authors have used the experimental data to develop machine learning based classifier which can be able to differentiate the two multi-tenant configurations

In the next paper on "**The study of telemedicine protocols and the application of IoT**", the authors studied the available telemedicine protocols and the possible applications of IoT in healthcare. The concepts contained in IoT are studied by the authors in the Domain models based on IoT. The authors in the paper have studied the concepts contained in IoT are studied in the Domain models based on IoT.

In the last paper on **"Interoperability deployment in e-business applications"** the authors have discussed the possible methodologies of the applications of e-business in transport domain. They studied the interoperability related to the use of systems such as B2B integration, information integration, service-based integration, and portal use.

We hope that these papers generate more interest among the users.
