

## **Editorial**

We release the last issue of the fourteenth volume of the **International Journal of Web Applications** with the below research papers.

In the first paper on “**Interoperability standards impact on the Cloud Virtualization**” the authors have studied the virtualization and pay-by-use in the cloud environment. In the work they described a few interoperability standards and the causes for its deployment. Mobile computing with three systems of models are also explained in this study by the authors.

In the second paper on “**Queuing Theory use in the optical line terminal with MATLAB**”, the authors have outlined the OLT process and the reliance of traffic characteristics from many input streams with flow parameters which help to use the mathematical design with MATLAB. The authors have used the queuing theory to explain the optical line terminal

The last paper on “**End-users’ Satisfaction in the academic information usage: Perspectives from Tribal Region’s Learning Community**” is based on the study of information use in academic setting. The authors in this paper have evaluated the satisfaction level of the end users, and explained the Information Seeking Behaviours (ISBs) of the Tribal Region’s Intellectual Community. The study found that information professionals provided the utmost satisfaction and designed a user-centric information services model.

We do hope that the papers are interesting to read.
