Editorial

We present the June issue of this volume of the **Information Security Education Journal** with the below described research.

In the first paper on "**A Study of the users on the security codes**" the authors studied the usability elements in CAPTCHA among general users. Through the online questions, the authors have collected the data and analysed it with interesting results.

In the next paper on "**A Solution for the security attack using Distributed denial of services**" the authors proposed a network solution called as DenfensePro for safeguarding the network resources. The authors experimented the efficiency of the introduced solution for network resources protection.

In the last paper on "**A Survey of the security practices in the South East part of Europe**" the authors described the security practices of data, control systems of the transmission system operators. The survey has been conducted in the South East Europe part which revealed the practices and developments related to infrastructure in electricity networks.

In the next issue, we will come up with more intensive research.
