Citations influence individual tenure, positions, institutional rankings, project funding, and academic rankings. Some believe that even without much quality, publishing and getting cited is possible. Is it true? Yes- not completely, but in certain cases and to some extent.

Visibility Process. When scientific output is available, it needs to be read, given attention, and have higher visibility to attract other researchers to use and cite it. There are many strategies and mechanisms available to promote its use and impact. These strategies are individual driven and institution driven. It is worth examining the processes with the help of several illustrations and live measures. *Research Productivity* and *Subsequent Use* will be the core theme of the proposed training workshop.
