• The Fifth International Conference on the Applications of Digital Information and Web Technologies (ICADIWT)	

Editorial

We are pleased to release this issue of the Journal of Electronic Systems.

The first paper deals with the UDT protocols. The authors *Tatikayala Sai Gopal, Rahul Jain, Reddy Lakshmi Eswari Jyostna and Srinivasa Reddy Kamatham* in their paper on “**Securing UDT Protocol using Secure Socket Layer**” claim that the UDT protocols suffer from lack of security layer. Hence, they proposed an approach to integrate Secure Socket Layer with UDT protocol and present detailed analysis report of overhead involved and performance of secured UDT in an emulated testbed.

User experience and testing of mobile devices is carried out by *Lim Tek Yong* in his paper on “**User Experience Testing: A Case Study for Mobile Devices**”. The case study of user experience testing was carried out by the authors and result revealed that the selected mobile device scored high on usable, medium on valuable and low on likeable.

For the classification of ECG data, the authors *Pei Ling Lai and Alfred Inselberg* used the Nested Cavities (abbr. NC) classifier. They have used the classification in three levels where each level data processing is explained by them. With good amount of discussions they have described the findings and analysis. *Musa A Hameed Al Douri and Hussein H Owaied* in their paper on “**Adapting Enhanced the Simultaneous Localization and Mapping (SLAM) Process Based on Artificial Neural Network**” have discussed the Simultaneous Localization and Mapping process which helps to navigate and draw maps for environments. The authors claim that their proposed system was able to navigate an environment and build its own map accurately and without prerequisite.

The published papers we do hope offer insights in to the analyzed themes.
