

## Editorial

We bring the second issue of the **Journal of E-Technology** with the below described papers.

In the first paper on “**Developing Smartphone App to Protect Personal Data**”, the authors *Delilah Florea* and *Andrei Vasii* observed that smart phones are very essential in many applications including the use of social media. In a new system developed by them the user is able to walk anywhere he desires and with the help of this app he can turn back to his reference point whenever he wants. This concept can help to use the Internet regardless the user’s position in the world as it does not use the Internet or the location.

In the second paper on “**Informatic System for Monitoring Public Transportation in Urban Area**” the authors *Cristina Ciurte* and *Adrian Florea* viewed that the people’s needs for urban mobility are increasing. This paper shows how an application can improve the way a person uses the public transport and helps to save time. The solution is to have an informatic system which monitors the public transport activity. This application, developed in Android Studio, informs users about the real-time position of the bus.

In the last paper on “**The Effect of Strategic Learning for Human Resources on Dynamic Capabilities of Airlines Companies in Kuwait**”, the authors *Suliaman Al-Hawary Al al-Bayt* and *Hamad Al-Rasheedy* explored the impact of Strategic Learning for Human Resources on Dynamic Capabilities in airlines companies in Kuwait. The authors have recommend the managers and decision makers at airlines companies in Kuwait to give the ability to seize opportunities in the companies’ great importance because of their ability to enhance the market share of these companies and reflected on their competitive position.

We will come up with more research in the next issue.
