

Editorial

With this issue we have now completed the year 2020. The COVID 19 has impacted our research effects in this year.

This issue of the Journal of Information Organization has the below described papers. In the first paper on **“Analysis of images in Spatial Databases”**, the authors have used image retrieval process for the processing of images in the spatial similarity of the extended objects. A new system is introduced in this work for the spatial location of the objects in the images.

In the next paper on **“A synthesis on the development of software development with the Software Tools”** subject based software tools that can assist in the software development process are introduced. This work can lead to the process of software development is a way to increase both the effectiveness of teaching SE and the effectiveness of the software engineer’s work.

In the last paper on **“Metric use in the process of Text Encryption Software”** the authors detailed the various text encryption programs. The experimental outcome documented the meaningful differences between different encryption programs, which were under research process. We do hope to bring more significant research in the next volume.
