(INTECH 2016)

Editorial

We with this issue complete the fifth volume of the Journal of Information Organization. In this last issue we publish two research pieces that describe the following sub-domains.

Independent Component Analysis is a major technique used for research in interdisciplinary directions. Understanding its value the author *Xiaoxia Chen* has applied it in agriculture insurance using the work on " **Independent Component Analysis in development of Chinese Agriculture insurance"** The core aim of this paper is to find the most impactful component in the agricultural research. The author did experiments which have good value for the selected sub-domain.

In the another paper on "**A Flipped Course Delivery: A Practitioner Approach with a Case study"**, the authors *Parkavi* and *Vetrivelan* made good research in the area Flipped course Traditionally courses have limitations as they are taught to the students using black board. Nowadays teachers have started using power point presentations for their teaching. In the current paper, authors discuss the different course delivery methodologies, they are practicing with continuous refinements. The authors suggest different learning activities, assessment methods and their outcome analysis in the paper.

We will come out with more research in the next volume.
