

Editorial

We now bring the last issue of the ninth volume of the **Journal of Information Organization** with the below described papers.

In the first paper on "**Perception of E-Learning in Continuing Education by Midwives in Hospital Centers in the Casablanca-Settat Region**" the authors *Amina LHBIBANI, Said LOTFI, Malika TRIDANE* and *Said BELAAOUAD* determined the factors influencing the perception of E-learning and its usefulness in continuing education (CE) by midwives practicing at eleven hospital centers in Morocco. During experimentation the authors have found with the help of results that showed the intent to use and the adoption of E-learning within the hospital centers in the first place, are significantly related to the perceived usefulness, perception of ease of use, the conditions facilitators and social influence.

In the second paper on "**Effect of Workforce Diversity on Job Performance of hotels working in Jordan**" the authors *Sulieman Al-Hawary* and *Ayat Mohammad* examined the impact of workforce diversity on the job performance in hotels operating in Jordan. The results of the study supported the hypotheses that workforce diversity dimensions; Gender, age, nationality and educational background have a positive impact on job performance.

In the last paper on "**Prediction of Employee Retention using Cassandra and Ensemble Learning**" the authors *Shubham Karande, Ajay Shelake, Sivagami* and *Sharon Sophia* have used the ensemble learning to solve the problem, rather than focusing on a single classifier algorithm and it will combine weak learning algorithms to get a better ensemble model. They have used Cassandra to store the data in the form of table and retrieving data to perform machine algorithm on them.

The papers hope to be more interesting.
