

Editorial

We are pleased to release the Eleventh volume of the **Journal of Information & Systems Management** with the below described research.

In the first paper on **“An electronic business process system for Non-Information Technology professionals”**, the authors have designed an electronic system for Business learning operations. In this work we have developed a web-based tool which can help to create business activities automatically. This system is particularly useful for Non-Information Technology professionals.

In the next paper on **“Big data analysis of Spatio-temporal Data”** the authors have proposed the model of spatio-temporal mining process and explain the telecom data used. This process has been applied in many disciplines and it involves interdisciplinary approach.

In the next paper on **“Cloud interactions in the cloud application orchestration”** the authors studied the cloud application orchestration. They have used ontology for this task and used IoT device connectivity. They have presented an illustration for applications with a description of the functionality.

These papers are able to generate more interest in the system design research.
