

Editorial

We now bring you the last issue of the current volume of the Journal of Information & Systems Management with the below detailed research. In the first paper on “**Study the Impact of Multiple Mobile Sinks on the lifetime of Wireless Sensor Networks**” the authors *Zubaria Andleeb* and *Rizwan Anjum* have presented the simulation based analysis of using multiple mobile sinks in network and their effect on the lifetime of a network. Their intention is to analyse the impact of multiple mobile sinks with proactive hierarchical clustering protocols LEACH and network reactive hierarchical protocol.

In the second paper on “**A Cloud-based Transcoding with Partial Content Protection Scheme**” the authors presented an effective multimedia content protection technique that removes the need to decrypt the video prior to transcoding. The authors claim that the proposed scheme significantly simplifies cloud-based processing compared to previous schemes.

Ali Salman, Samuel Mintah, Tomáš Hes and *Haiyan Sulaiman* in the last paper on “**A proposed model for applying TQM in Syrian banks**” have applied the Total Quality Management to industrial banks of Syria. They have supported the proposed TQM Model with an implementation plan that could help other Syrian banks to apply TQM in an effective way.

The papers published in this issue add to the systems knowledge and its information constituents.
