Editorial

The Journal of Networking Technology (JNT) continues to serve the powerful interests of the researchers by addressing many issues. It is established that there is a continuing need to activate research and experimentation for global interests. This means that the independent as well as collaborative research initiated by research groups are of critical importance in providing alternative perspectives to those challenges in networking.

This issue has some very important pieces of research in the innovative and specific areas of networking. Besides, the JNT tries to publish research in the peripheral issues which contribute to build the nucleus of Networking,

We do hope that JNT will cater the expected requirements of the networking users.
