Features of DLINE Journals

- ✓ DLINE Journals in Science, Engineering, Technology and Management
- ✓ DLINE - The Information Gateway to Science and Technology Innovation.
- ✓ DLINE is a member of CROSSREF
- ✓ DLINE Journals serve as the gateway to the Scientific and technical knowledge.
- ✓ DLINE journals undergo rigorous peer-review process and ensure originality in content and contribution. DLINE publishes eminent and reviewed journals in Science, Engineering, Technology and Management.
- ✓ In 2026, DLINE will offer 24 reviewed journals available in both print and online formats.
- ✓ DLINE offers access to PDF Full-Text articles from Current Content and All Online Back Files Published Since 2003.
- ✓ DLINE offers access to Online Early Articles, i.e., Peer-Reviewed Articles published online before the Print Issue is completed.
- ✓ Archival Access to Paid-For Content, Where DLINE has the Rights to Deliver IP and/or Remote User
- ✓ Remote IP based Access/Password Authentication.
- ✓ DLINE offers the Usage Statistics.
- ✓ DLINE searching mechanism is more functional where it offers full text papers which are searchable for Author, Title, Keywords, Journal Name and Year/Period.

2026 DLINE JOURNALS CATALOGUE

Journal of Digital Information Management

The Journal of Digital Information Management (JDIM), a bimonthly Journal of Digital Information Science and Technology, has been published since March 2003. Sponsored by the Digital Information Research Foundation, it concentrates on all aspects of Digital Information Management, and covers digital information processing, Digital content management, Digital world structuring, Digital libraries, Metadata, Information management and other related fields. An international peer-reviewed Journal, JDIM contains original research papers, ongoing research, technology reviews, reports on work-in-progress, short notes and announcements of forthcoming events. It acts as a portal to the digital information world.

Editor-in-chief

Daisy Jacobs, University of Zululand, South Africa
Stephanne Bressanne, National University of Singapore
Adrian FLOREA, Lucian Blaga' University of Sibiu, Romania

International Journal of Web Applications

In the last few years there is a growing demand for different web applications. As the demand for applications increase, research is now focused on many directions; to leverage new architectures, improve scalability, developing new frameworks, introducing new development platforms, building multi-tier applications, enhance scripting languages, improving filters, introducing security platforms and so on. In the web applications we experience many generations. While the first level generation was primitive with little scope and features, the subsequent generations look at improving technology, functions and features in the web world. Realizing the need to document the current research in the Web applications, this international journal has been initiated. The "International Journal of Web Applications" (IJWA) intends to be a high quality referred journal. The IJWA invites original contributions in the areas listed below. The IJWA publishes research papers, technical reports, book reviews and notifications. Each submission undergoes extensive review.

Editor-in-chief

Simon Berkovich, George Washington University, USA
Ching-Hsien (Robert) Hsu, Chung Hua University,
Taiwan
Daisy Jacobs, University of Zululand, South Africa

2026 DLINE JOURNALS CATALOGUE

Journal of Intelligent Computing

The aim of this international journal is to provide a platform for original and significant contributions in the field of Intelligent Computing in its wide scope. Intelligent Computing is taken here to include theory, algorithms, applications and technologies. This journal is a forum for scientists, engineers, and practitioners to present their latest research results, ideas, developments and applications in Information retrieval on the web, Information Sciences, Artificial Intelligence, Mobile Computing, Networking, Web Content Mining, Health Informatics, Bioinformatics and IT Applications across disciplines.

Journal of Multimedia Processing and Technologies

The Journal of Multimedia Processing and Technologies (JMPT) aims to provide a multidisciplinary forum to present and discuss theory and research, development, architectures, networking, system support tools and applications as well as case studies of multimedia and hypermedia. It also features experimental and survey articles. It seeks to fill the gap that exists between several fields and communities such as image processing, video processing, audio analysis, information retrieval and understanding, data management and mining, security, and education. The journal is intended for academic researchers, practitioners, industry professionals, consultants, managers, students, educators, policy makers and engineers working in the field and/or are involved in multimedia system research, design and applications.

Journal of Information Technology Review (JITR)

Journal of Information Technology Review is a scholarly journal in Information Technology and its applications. It publishes original and scholarly papers after rigorous peer reviewing. The R & D have been transforming the Computing paradigms and technology in multidimensional directions. Research in Information Technology is distributed, heterogeneous, and multidisciplinary. The Journal of Information Technology Review characterizes the innovative IT, by addressing the significant areas and themes in Information Technology.

International Journal of Information Studies

The International Journal of Information Studies seeks the advancement of the knowledge in the expanding field of information studies. Our mission is to attract the highest quality theoretical and applied research in the field of information studies, including information science, management, retrieval, analysis, systems, theory, applications, and policy, as well as in the field of human-computer interaction. The International Journal of Information Studies is a scholarly journal dedicated to reflect the interdisciplinary and dynamic field of information studies. Our aim is to promote the exchange of information and knowledge among researchers around the globe in general, and among Arabic- English speaking scientists, practitioners, and educators in particular. The International Journal of Information Studies is a bilingual peer-reviewed publication. We welcome articles in both English and Arabic. Abstracts will be provided in both languages. We believe a commitment to top-quality research in both languages will increase and enrich the reach and impact of the journal.

Journal of Data Processing

The production of mass of heterogeneous data has created multiple issues and challenges. Researchers based on intuition as well as empirical evidence are distilling an alarming array of information into a corpus of manageable core concepts. The requirement is to use the theoretical and practical approaches as vehicles to introduce a broad variety of solutions and applications with a high precision. The Journal of Data Processing is planned to publish systems for data processing that are scalable to support a variety of algorithms and to function so that additional incorporation of informatics modules does not interrupt production systems.

2026 DLINE JOURNALS CATALOGUE

Journal of Information Organization

Organizing information is a bottom-line issue for establishing frameworks for thought used in research and teaching across scholarly disciplines. It assists in the formation of useful concepts and it serves to assist in many emerging paradigms. Information organization is highly significant for the end-users to gain understanding of knowledge processing and information. It has more applications in computer programs where people process information to arrive at definite conclusions and gain inferences. There is a body of good applications such as biological data processing, medical expert systems, E-learning, E-commerce and semantic Web.

These applications require well-thought-out conceptual structures which must be developed by beginning from scratch or by refining existing knowledge organization and information processing systems. There is a good scope for working on the issues such as interoperability, interface, ontologies, taxonomies, solving complexities and so on.

All papers are peer reviewed by a minimum of two reviewers.

Journal of Electronic Systems

The electronic systems are expected to have a significant impact on the lives of people in the coming years. Electronic technologies require specific power electronics capabilities to convert the power generated into useful power that can be directly interconnected with the utility grid and/or can be used for consumer applications. The mission of the Journal of Electronic Systems is to publish high scholarly research in electronic systems from the macroscopic through the microscopic levels. The themes include power systems monitoring and operation; automatic control; power electronics; high-voltage engineering; and conventional, operation; automatic control; power electronics; high-voltage engineering; and conventional, continuum, and biological electro- mechanics digital control systems, electronic payment system, electronic ignition system, and digital communication systems. The JES will publish high level technical as well as original and significant contributions relating to the theory, architecture modeling, design, performance and reliability of electronic and integrated circuit devices and interconnects, involving insulators, metals, organic materials, micro-plasmas, semiconductors, quantum- effect structures, vacuum devices, and emerging materials with applications in bioelectronics, biomedical electronics, computation, communications, displays, micro-electro mechanics, imaging, micro-actuators, nanotechnology, optoelectronics, photovoltaics, power ICs and micro-sensors. The themes integrate the sources, channels and means involving all types of terminals, computers and information processors.

Electronic Devices

Electronic Devices is a comprehensive primary medium of disseminating research in electronic devices and related fields for a wide range of multidisciplinary audiences. The goal of this scholarly journal is to give an update of state-of-the art in this interdisciplinary field, while focusing on new trends in electronic device research.

Progress in Computing Applications

Progress in Computing Applications (PCA) concentrates on applications rather than the presentation of theoretical aspects such as concepts, architectures and algorithms. The journal will publish all aspects of computing papers other than the theory and other related papers. In the wider sense, we are interested in investigating several aspects of the computing engineering process that remain poorly understood in relation to other domains. We believe that challenges related to testing, in particular, will need to be addressed further before the applications become live.

Digital Signal Processing and Artificial Intelligence for Automatic Learning

AL usually plays an important role in the transition from data storage to decision support systems based on very large databases of signals such as the data obtained from sensor networks, internet services, or communication systems. These systems stimulate development of both computational solutions and novel models. Signals from real world systems such as speech, music, bio-medical, multimedia, among others, are usually quite complex making digital signal processing very useful to automate analytic operations in order to retrieve information from the data storage. Topics will range from foundations for real- world systems, and speech processing to language analysis, biomedicine, convergence and complexity analysis, machine learning, social networks, sparse representations, visual analytics, robust statistical methods.

Journal of Science and Technology Metrics

Science and Technology Research Evaluation is increasingly a mandatory requirement in the research management systems across countries. Newer indicators are produced and tested to improve the reliability of evaluation. Still, a perfectly acceptable solution in the 'research-evaluation' system is elusive. Assessment transcripts generate both linear as well as skewed models reflecting inconsistencies. Approaches and techniques to identify the objectivity to derive significant insights are thus essential in the science and technology research assessment.

The Journal of Science and Technology Metrics is concerned with how the use of many metrics may involve the assessment of different aspects of science and technology which is best expressed using different approaches. The journal is expected to provide a platform for presenting novel ideas and discussing their application of metrics in Science and Technology System.
