Editorial

We are pleased to release the first issue of the current volume of the **Progress in Computing Applications.** This issue has the following described studies.

In the first paper on **"Application of the Western Art form Based on Artificial Intelligence"** the authors *LIN Jun* and *ZHANG Bo* have used artificial intelligence for the processing of western art. Authors feel that it prompts the rationalization of western art in convergence and development constantly.

Baiyi Huangin the next paper on **"Effective Data Access Technologies in Mobile Computing Environment Based on Analysis"** has addressed the data access issue in mobile computing. The development of mobile computing technology as the author viewed has brought the rapid development of the new field of mobile databases. The author in this work has proposed the disk-based broadcast technology, mobile data terminal data caching ,etching combining mobile computing environment and data distribution technology.

In the last paper on **"Lecture Notes of Research on Volleyball Teaching Based on Artificial Intelligence"** the author *HUANG Ping* has addressed the impact of the artificial intelligence on Research on Volleyball Teaching. The author has found that the artificial intelligence can effectively simulate the expert control the process of teaching thinking, to guide and optimize the preparation process, through the examination of teaching experiment.

The papers of this issue are technically reap improvements.
